

Informed consent

STANFORD UNIVERSITY

RESEARCH CONSENT FORM

Protocol contact:

Bobbie Macdonald

PhD Student

Department of Political Science

Stanford University

Protocol Approval Date: 11/18/2016

DESCRIPTION: In this research study, you will be asked about your consumption patterns and will then be told about a new consumer product. You will be provided with a summary of the purpose of the study at the end of the study.

TIME INVOLVEMENT: This is a three-wave research study. You will complete the first survey wave immediately. You will then be invited to participate in the second wave approximately one week from today. The third wave will be approximately two weeks after the second wave. The follow-up surveys will be short (5-10 minutes online).

RISKS AND BENEFITS: There are no foreseen risks associated with this research study. Throughout the study, you will have the opportunity to learn about some new products that

may be of interest to you. We cannot and do not guarantee or promise that you will receive any benefits from this study.

PAYMENTS: For your participation, you will receive \$1.00 for the initial survey and \$0.50-1.00 for the follow-up surveys. Bonuses will be available.

PARTICIPANT'S RIGHTS: If you have read this form and have decided to participate in this study, please understand your participation is voluntary and you have the right to withdraw your consent or discontinue participation at any time without penalty or loss of benefits to which you are otherwise entitled. The alternative is not to participate. You have the right to refuse to answer particular questions. The results of this research study may be presented at scientific or professional meetings or published in scientific journals. All of your responses will be de-identified, such that you can not be personally identified from the information collected in this study.

CONTACT INFORMATION:

Questions: If you have any questions, concerns, or complaints about this research, its procedures, risks, and benefits, contact the Protocol Director, Bobbie Macdonald at bmacdon@stanford.edu.

Independent Contact: If you are not satisfied with how this study is being conducted, or if you have any concerns, complaints, or general questions about the research or your rights as a participant, please contact the Stanford Institutional Review Board (IRB) to speak to someone independent of the research team at (650)-723-2480, toll free at 1-866-680-2906, or via email at irb2-manager@lists.stanford.edu. You can also write to the Stanford IRB, Stanford University, 3000 El Camino Real, Five Palo Alto Square, 4th Floor, Palo Alto, CA 94306.

Permission to conduct this study has been obtained from Stanford University and the study has been cleared by the Stanford Institutional Review Board. You are of course free to discuss your participation in this study, and to obtain copies of the results upon the study's completion by contacting the protocol director (Bobbie Macdonald, bmacdon@stanford.edu).

You may print or save a copy of this consent form for your records.

By consenting to participate, you certify that you have received sufficient information describing the procedures and that you voluntarily agree to participate in the study. Refusal to participate or withdraw after agreeing to participate will not affect your employment or organization.

I agree to participate in this research study and understand that I may withdraw my participation at any time. I also acknowledge that I am over 18 years of age and I understand that I may register any complaint with the Stanford Institutional Review Board.

Intro questions

On a scale of 1-5, where 1 is "not at all" and 5 is "a great deal", how much do you care about each of the following issues?

	How much do you care?				
	Not at all	A little	A moderate amount	A lot	A great deal
Catastrophic risks (e.g. nuclear risks, pandemics)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Youth	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Local development	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Women's issues	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Elderly	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Climate change	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
	Not at all	A little	A moderate amount	A lot	A great deal
International development	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Health	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Education	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Arts and culture	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Economic poverty	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Animal well-being	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
	Not at all	A little	A moderate amount	A lot	A great deal

What are the TWO most important things that you take into consideration when deciding whether to purchase meat at the grocery store? Meat includes chicken breasts, ground beef, pork chops, eggs, fish fillets, etc.

You may select up to TWO of the criteria below.

- ☐ Nutritional content of the product
- ☐ How the product tastes
- ☐ Price of the product
- ☐ Whether the animals had a good standard of living
- ☐ The environmental impacts of the product
- ☐ Whether the product is antibiotic and/or hormone free
- ☐ Other (please specify):

Animal agriculture poses significant health risks to humanity, including the spread of disease, antibiotic overuse and bacterial contamination. "**Clean**" meat—that is, **real meat grown in a lab from animal cells** without the need to raise and slaughter an actual animal—offers significant benefits in this respect, and is currently being developed by several startup companies.

Some of the public health benefits of clean meat include:

- **Antibiotic resistance:** 80% of antibiotics used in the United States are used on farm animals.[1] This overuse of antibiotics causes bacteria to evolve and become antibiotic-resistant. In November 2015, a superbug was discovered that is resistant to even our last resort antibiotics; this is believed to be a result of the overuse of antibiotics in animal agriculture. In May 2016, the superbug was detected for the first time in the US, prompting the director of the Center for Disease Control to claim that “the end of the road isn’t very far away for antibiotics.”[2] **Clean meat is expected to reduce or eliminate the use of antibiotics in meat production.**

- **Bacterial contamination:** The process of slaughtering an animal creates a myriad of potential avenues for contamination. Consumer Reports inspected 458 pounds of ground beef from a variety of sources, and found that all of it contained fecal contamination.[1] Other common sources of contamination include salmonella and E. coli. Because clean meat is produced in a sterile environment and does not require slaughtering an animal, **risk of bacterial contamination is greatly reduced.**

Animal agriculture is one of the most environmentally destructive industries in the world. With the global population expected to reach 9.7 billion by 2050, and meat production expected to double in that time, organizations like the United Nations are urging populations to eat less meat. However, all indicators suggest that meat demand will continue to rise despite these warnings. **Clean meat—that is, real meat grown in a lab from animal cells** without the need to raise and slaughter an actual animal—offers significant benefits in this respect, and is currently being developed by several startup companies.

Since the post-war period, increased demand for meat has forced suppliers to make meat production more efficient. While this has allowed meat supply to match meat demand, it is often done at the expense of the factory farmed pigs, chickens and cows—animals that are just as capable of suffering as the dogs and cats we love. Each year, hundreds of billions of

animals are raised for food, and most of them endure immense amounts of suffering. **Clean meat—that is, real meat grown in a lab from animal cells** without the need to raise and slaughter an actual animal—offers significant benefits in this respect, and is currently being developed by several startup companies.

The harm done to animals in the creation of conventional meat products that would be avoided with clean meat includes:

- **Confinement in small cages:** Farm animals are often kept in cages so small they are unable to turn around or fully extend their limbs. This also prevents them from engaging in natural behaviors[1]

Since the post-war period, increased demand for meat has forced suppliers to make meat production more efficient. While this has allowed meat supply to match meat demand, it is often done at the expense of the factory farmed pigs, chickens and cows—animals that are just as capable of suffering as the dogs and cats we love. Each year, hundreds of billions of animals are raised for food, and most of them endure immense amounts of suffering.

Vegetarian meat alternatives offer significant benefits in this respect, and new options are currently being developed by several startup companies. This article discusses a new,

animal-free substitute.

The harm done to animals in the creation of conventional meat products that would be avoided with this product includes:

- **Confinement in small cages:** Farm animals are often kept in cages so small they are unable to turn around or fully extend their limbs. This also prevents them from engaging in natural behaviors[1]

- **Antibiotic resistance:** 80% of antibiotics used in the United States are used on farm animals.[1] This overuse of antibiotics causes bacteria to evolve and become antibiotic-resistant. In November 2015, a superbug was discovered that is resistant to even our last resort antibiotics; this is believed to be a result of the overuse of antibiotics in animal agriculture. In May 2016, the superbug was detected for the first time in the US, prompting the director of the Center for Disease Control to claim that “the end of the road isn’t very far away for antibiotics.”[2]

[1] "Update: Farm Animals Get 80 Percent of Antibiotics Sold in U.S." Wired. 2010. <http://www.wired.com/2010/12/news-update-farm-animals-get-80-of-antibiotics-sold-in-us/>

- **Bacterial contamination:** The process of slaughtering an animal creates a myriad of potential avenues for contamination. Consumer Reports inspected 458 pounds of ground beef from a variety of sources, and found that all of it contained fecal contamination.[1] Other common sources of contamination include salmonella and E. coli.

Animal agriculture is one of the most environmentally destructive industries in the world. With the global population expected to reach 9.7 billion by 2050, and meat production expected to double in that time, organizations like the United Nations are urging populations to eat less meat. However, all indicators suggest that meat demand will continue to rise despite these warnings.

Discrete choice - Treatment intro

You will now be asked some questions comparing **clean** meatballs, **conventional** meatballs, and **vegetarian** meatballs.

Clean meatballs are meatballs made from meat that is grown from animal cells in a lab.

Conventional meatballs refers to the typical meatballs you can buy in a grocery store, *i.e.* meatballs produced with meat from factory farms.

Vegetarian meatballs refers to meatballs made from plant sources, such as beans or grains, that do not contain any meat ingredients.

Do you understand these three definitions?

- ☐ Yes
- ☐ Somewhat
- ☐ No

Video - WTP

Next, you will be presented with a short, 90 second video about factory farming. Some images may be disturbing. We will provide you with a bonus of 50 cents. Would you prefer to give up some part of this bonus in order to skip the video?

☐ Yes

☐ No

These page timer metrics will not be displayed to the recipient.

First Click: *0 seconds*

Last Click: *0 seconds*

Page Submit: *0 seconds*

Click Count: *0 clicks*

How much of this bonus would you be willing to give up to avoid watching the video? You may enter any number from 0 to 50. For example, if you would be willing to give up the entire bonus to skip the video, please enter 50. If you would be willing to give up 10 cents of the bonus to skip the video, please enter 10.

Regardless of what value you enter, there is some chance you may be asked to watch the video and will be awarded the full bonus. However, this probability depends on what you enter, and if you enter a higher number you have a lower chance of being asked to watch the video.

We will give you an additional 10 cent bonus. However, you can choose to give some of this bonus to a charity that helps prevent harm to farm animals. For every 1 cent of your bonus that you give up, we will give 2 cents to this charity. How much would you like to give up?

For example, if you select "5", you will receive 5 cents and the charity will receive 10 cents; if you select "0", you will receive 10 cents and the charity will receive 0 cents; if you select "10", you will receive 0 cents and the charity will receive 20 cents.
